Transfer bean bag sofa filling freely and easily. No more spilling the beans.

Congratulations

on buying a Funnelweb compatible bean bag.

You have not only purchased a premium quality designer lounge product, but have potentially saved yourself much heartache in its filling, maintenance and use.

The Funnelweb™ system is designed by Ambient Lounge™ so that you don't 'spill the beans' when filling, cleaning, topping up and storing your beanbag.

Now all you have to do is relax!

What is the Funnelweb System?

This Funnelweb's system is designed for easy transfer and/or storage of beans, and is used for filling, storing, washing or emptying your bean bag. It's a hassle-free process, transforming a previously difficult & messy task to a quick, clean and simple one-person operation.

The Funnelweb™ is a revolutionary advantage, invented and patented by Ambient Lounge™, that includes both the funnel gusset located under your bean bag's main zip and an attachable external bag.

The external Funnelweb™ bag attaches to all Funnelweb™ compatible bean bags via a secure zip. When connected, you can decant beans or filling between the two bags by simply tipping.

It's easy to use and takes just seconds to master.

Please follow our visual instructions on the following pages...

FILLING BEAN BAGS THE OLD MESSY WAY

FILLING WITH THE **Funnelweb** ADVANTAGE
Easy Fill/Clean Bean Bag System

FILLING AND EMPYTING YOUR BEAN BAG - STEP BY STEP GUIDE

1 preparing

begin with your funnelweb™ external bag filled with enough polystyrene beads to fill your bean bag sofa cover. Normal adult bean bag sofa takes around 280 litres or 10/11 cubic feet depending on personal comfort levels.

2 unzipping

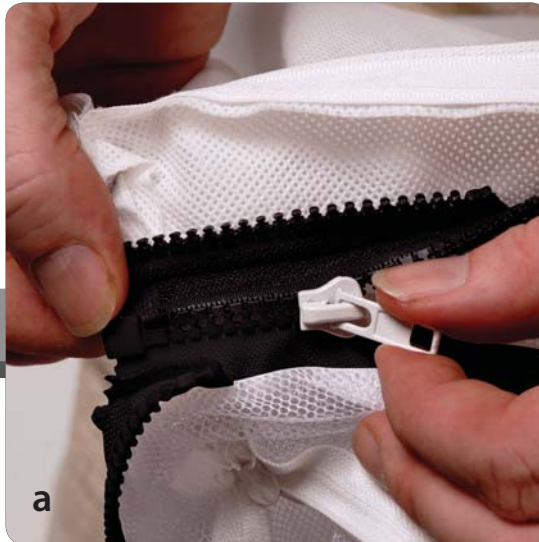

- a) Your bean bag cover has a child proof YKK main safety locking zip specifically to prevent infants from potentially inhaling the beads. This Zip has no toggle on purpose. Please unzip the safety locking Zip by sliding a paperclip under catch - as per the instructions on the bean bag label. Once main zip is open, pull out the internal gusset from inside the bean bag.
- b) Unzip the top zip of the internal gusset inside the bean bag and fold back to expose the Second, larger (black coloured) zip underneath. Also unzip the external Funnleweb™ bag top zip and fold back to expose the larger (black coloured) zip.
- c) Prepare to join the two larger black zips together on both bags.

3

attach and tipping

- a) attach the larger (black coloured) zip head from the external bag to the matching sized (Black coloured) zip from the beanbag internal gusset. Zip carefully around in a circular motion until fully closed, so beads cannot escape between the bags.
- b) By simply tipping the beanbag or external Funnelweb™ bag, you can now decant beans between bags without spillage.

4

filling levels

fill the bean bag to your own personal comfort levels.

You can test by sitting on your bean bag without removing the external funnelweb bag.

Once satisfied, remove the funnelweb by zipping carefully and shaking so no beans are near the mouth opening.

Keep external Funnelweb bag stored safely and reverse the process when you want to empty and/or clean your cover.
